

**LogTrade BarLink is a software for manufacturing units that needs individual marking and traceability on each unit of the product. Logtrade BarLink can run as a client/Server application or as a standalone installation.**

BarLink prints labels on Zebra printers, collects and reports information of traceable products in a local database. Each manufactured product can be defined with an individual-unique serial number. The use of barcode labelling makes the input of data simple and correct. BarLink supports marking for "single product" (boards), "combined product" (cabinets), packaging and makes it possible to use customer specific labels. With BarLink you can also remark and report altered or repaired parts that is included in a "combined product" with a reported structure. By using BarLink you can gain higher security and comply with the Ericsson requirements. It's also possible to create non-reported structures and later on combine them while reporting, changing structural data on already reported items: like changing revision, altering individual parts, deleting reported parts etc.

In an Outlook environment BarLink can use Mail via MAPI to send and request information to a master traceability system for example the Ericsson Tracy database.

It is possible to process, send and receive such information as scheduled tasks.

It is possible to add so called Synonyms on each or some produced serialnumbers, like Ethernet-address, IP-adress etc. Synonyms may be added automatically from a preset counter or entered or "scanned" manually for each produced serialnumber-label.

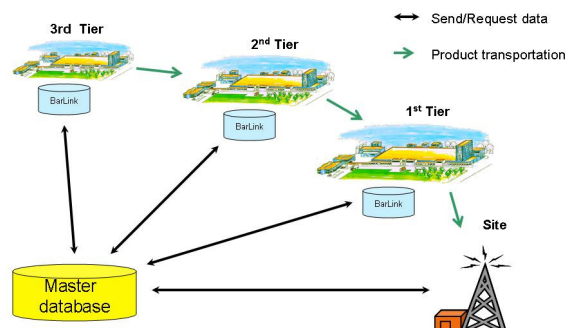

BarLink is delivered with a generic component which makes it possible for you to use BarLink even when not manufacturing products for Ericsson. You can use it for printing labels with your own layout and mark Your products to keep your local traceability.

BarLink's LiveUpdate functionality and our support/upgrade agreement makes it easy to keep your software updated with the latest version.

The included Barlink Report center makes it possible to create simple printable reports on production statistics, more report types can be created with Crystal Reports.

The liveInfo function keeps the user informed on f.ex. the availability of new versions of Barlink. The LiveUpdate function makes it possible to install the new versions via Internet.

#### Sending traceability data

**Logtrade Barlink AB**

Jungmansgatan 12

## System Requirements

-  Pentium, 350 MHz or higher, minimum 128MB RAM
-  Hard drive with at least 100 MB free disk space
-  Screen resolution 800\*600 or higher
-  Operating system:XP or Vista
-  MS Access 2000 or higher (or)Optional: MS SQL Server 2000 or higher
-  Zebra (300 dpi) for product labels, model depending on smallest label size. Optional: Zebra (200 dpi) for package labels.
-  Bar Code reader from Symbol, PDF417 capable and VHD(Very high density) for labels with PDF barcodes. For other barcodes most normal scanners will work

## Barlink system Enviroment

## Benefits of BarLink Treceability software

-  Installation is easy and has short installationtime. Can run as a client/server application or as a standalone.
-  Liveupdate functionality and our support/upgrade agreement makes it easy to keep your software updated with the latest version.
-  Printers is easy to configure cause BarLink use windows spoolfiles
-  Support Ericssons requirement of production, such as product names, revisionstates, serialnumbers etc
-  Generic component makes it possible for You to use Your own Businessrelated labels.
-  The included Barlink Reportcenter makes it possible to create simple printable reports on production statistics

## Installation and start Up

To order BarLink please fill in our [OrderForm](#) at [www.logtrade.se](http://www.logtrade.se) or send an e-mail to [order@logtrade.se](mailto:order@logtrade.se) with subject "BarLink Order". If you want more information you can contact [Niklas Olsson](#). As soon as we receive your order we will contact you to distribute the software on a CD or make it possible for you to download BarLink via Internet or ftp. Ericsson suppliers need to get in contact with IBM/Ericssons Tracy team to get information about sending traceability data to Tracy etc.
